

Dear Hiring Manager,

I am writing to express my interest in the Data Scientist position at adidas. I hold a background in Computer Science and Engineering, with a strong focus on data science, software development, and data-driven systems. Currently, I work as a Software Engineer, where I design and build scalable solutions that integrate data processing, analytics, and performance optimization.

In my experience, I have worked with Python and SQL to analyze, transform, and structure data for analytical use. I have applied data modeling techniques to organize datasets effectively, ensuring they are reliable, consistent, and accessible for downstream analysis. I am also experienced in building data visualizations and dashboards, focusing on clarity, usability, and actionable insights.

Additionally, I have experience in developing and testing data-driven solutions, applying best practices in coding, version control using Git, and documentation. My background in machine learning allows me to approach problems not only from a data engineering perspective but also from an analytical and predictive standpoint, contributing to more advanced data use cases.

I am particularly interested in adidas due to its global impact and strong emphasis on innovation, analytics, and digital transformation. I am motivated by the opportunity to contribute to data-driven decision-making processes while working in a collaborative and high-performance environment.

What differentiates me is my ability to combine strong technical skills with a clear understanding of how data supports business decisions. I focus on building solutions that are not only technically sound but also practical, scalable, and aligned with business needs.

I would welcome the opportunity to contribute to your team and further discuss how my background aligns with adidas' goals.

Thank you for your time and consideration.

Sincerely,
Juan José
