

Dear Hiring Manager,

I am writing to express my interest in the AI Engineer position at Clara. My background combines software engineering and data science, with a strong focus on building and deploying data-driven and AI-powered solutions end-to-end.

In my experience, I have worked across the full lifecycle of data and AI systems—from data extraction and processing to building production-ready applications. I have strong proficiency in Python and experience integrating APIs, designing backend services, and developing scalable solutions that prioritize reliability and performance.

I have built projects where I leverage data pipelines, automation, and analytical workflows to solve real problems, always focusing on delivering practical and usable solutions rather than theoretical ones. I am particularly comfortable working in fast-paced environments where requirements evolve quickly, and I can take ownership of a problem from idea to implementation.

What stands out in my profile is my ability to bridge engineering and data. I approach AI not just as a model-building exercise, but as a product: integrating it into workflows, ensuring data quality, and delivering features that create real business value. I prioritize speed and pragmatism while maintaining solid engineering practices.

I am especially interested in Clara's Innovation Team because of its focus on rapid execution and real-world impact. The opportunity to build and ship AI-powered features in production, iterate quickly, and work closely with product and business teams strongly aligns with how I like to work and grow.

I would welcome the opportunity to contribute to Clara by building high-impact AI solutions that improve operations and customer experience.

Thank you for your time and consideration.

Sincerely,
Juan José
